Application No.: 09/893,970 2 Docket No.: 8733.453.00-US

AMENDMENTS TO THE CLAIMS

- 1. (Currently amended) A liquid crystal display device, comprising:
- a first substrate;
- a main seal on the first substrate and defining a liquid crystal injection area;
- a first step coverage compensating step-shaped compensating layer disposed between the first substrate and under the main seal;
- a plurality of dummy seals on the first substrate and external to the liquid crystal injection area; and
- a second step coverage-compensating step-shaped compensating layer disposed between the first substrate and under the plurality of dummy seals, the second step coverage-compensating step-shaped compensating layer having substantially a same thickness as the first step coverage-compensating step-shaped compensating layer.
- 2. (Original) The liquid crystal display device according to claim 1, wherein the main seal is provided with a liquid crystal injection hole through which a liquid crystal can be injected.
- 3. (Original) The liquid crystal display device according to claim 1, wherein the main seal and the dummy seals have a same thickness.
- 4. (Original) The liquid crystal display device according to claim 1, wherein the first eoverage compensating step-shaped compensating layer has a thickness of about 6500Å.
- 5. (Original) The liquid crystal display device according to claim 1, wherein a top of the main seal and tops of the dummy seals are a same distance from the first substrate.
 - 6. (Original) The liquid crystal display device according to claim 1, further comprising: a gate metal pattern on the substrate forming a gate line and a gate electrode; and a gate-insulating layer covering the gate metal pattern.
- 7. (Original) The liquid crystal display device according to claim 6, wherein the first and second step coverage compensating step-shaped compensating layers include the gate metal pattern and the gate-insulating layer.
 - 8. (Original) The liquid crystal display device according to claim 6, wherein the main

Application No.: 09/893,970 3 Docket No.: 8733.453.00-US

seal and the dummy seals are formed on the gate-insulating layer.

Claims 9-20 (Withdrawn)

- 21. (New) A liquid crystal display device, comprising:
- a first substrate;
- a main seal on the first substrate and defining a liquid crystal injection area;
- a first compensating layer with a width substantially the same as a width of the main seal disposed between the first substrate and the main seal;
- a plurality of dummy seals on the first substrate and external to the liquid crystal injection area; and
- a second compensating layer with a width substantially the same as a width of the dummy seals disposed between the first substrate and the plurality of dummy seals, the second compensating layer having substantially a same thickness as the first compensating layer.
- 22. (New) The liquid crystal display device according to claim 21, wherein the main seal is provided with a liquid crystal injection hole through which a liquid crystal can be injected.
- 23. (New) The liquid crystal display device according to claim 21, wherein the main seal and the dummy seals have a same thickness.
- 24. (New) The liquid crystal display device according to claim 21, wherein the first compensating layer has a thickness of about 6500Å.
- 25. (New) The liquid crystal display device according to claim 21, wherein a top of the main seal and tops of the dummy seals are a same distance from the first substrate.
 - 26. (New) The liquid crystal display device according to claim 21, further comprising: a gate metal pattern on the substrate forming a gate line and a gate electrode; and a gate-insulating layer covering the gate metal pattern.
- 27. (New) The liquid crystal display device according to claim 26, wherein the first and second compensating layers include the gate metal pattern and the gate-insulating layer.
- 28. (New) The liquid crystal display device according to claim 26, wherein the main seal and the dummy seals are formed on the gate-insulating layer.
